

Technical Advisory Bulletin (TAB)

Bulletin #: TBMELCO19A

December 14, 2017

Product: EMT16 PLUS, BRAVO

Implementation: ☐ Urgent ☐ Mandatory ☐ As Required ☒ Info Only

Reference: EC3371

Subject: New Machine Kit Packaging (Ex Denver Warehouse only)

SITUATION:

In the past the machine kit was sent to customers on either one large pallet carrying the machine box and a large option box (containing the machine cart and any other options and accessories), or on two pallets, a machine pallet and an option box pallet, that were nailed together. See picture 1 below. This solution, especially the 2-pallet combo, required a considerable amount of handling/prep time at Melco, and was not an optimal solution due to the non-fixed connection between the two pallets.

SOLUTION:

In order to make the final packaging of machine kits more efficient at Melco and provide a much more secure and safe solution for transport from Melco (for machine shipments ex Denver warehouse only) to the customer, the packaging concept was updated as shown in picture 2 below. The machine options and accessories are now placed on top of the machine box, with one of the boxes containing the machine cart and the other the rest of the options and accessories.
